PROFESSIONAL SUMMARY

Technology professional with dual post-graduate specializations in Artificial Intelligence and Cybersecurity, built on a foundation of 4+ years in full-stack and application development. Experienced in building production-ready ML systems, REST APIs, CI/CD pipelines, and cloud-deployed applications. Eligible to work in Canada.

SKILLS

Programming Languages:	Python, JavaScript, NodeJS, C/C++, Bash, PowerShell, SQL
Web Development:	HTML5, CSS3, JavaScript, React.js, Bootstrap, Node/Express.js, FastAPI, REST APIs, Database Management (SQL/NoSQL) MongoDB
Security Tools/Platforms:	Nessus, OpenVAS, Metasploit, Burp Suite, SQLMap, Nmap, Wireshark, Snort (IDS/IPS), Splunk (SIEM), pfSense, Kali Linux, Ubuntu, Windows Server
Security Concepts/Practices:	Vulnerability Assessment, Threat Detection, Network Traffic Analysis, Web Application Security (OWASP Top 10), Authentication/Access Control, Encryption/PKI, Risk Assessment, Incident Response, Malware Analysis
AI/ML/Data Science:	Prompt Engineering, RAG pipeline, XGBoost, scikit-learn, TensorFlow, DistilBERT, Transformers, NLP, FastAPI, Tableau, Matplotlib, Seaborn, Pandas, NumPy, Hypothesis Testing, Linear Regression, Statistical Analysis
Development/DevOps:	Git, GitHub, Docker, API Development, VirtualBox/VMware, Virtual Lab Environments, GCP, AWS (EC2, S3, VPC), Vercel

EXPERIENCE

Work Study Student , Durham College	May2025 – May2026
- Track and report on social media analytics, enrollment campaign performance, and digital engagement trends to support data-driven marketing decisions. - Lead campus tours for prospective students and families while participating in recruitment events and community outreach activities. - Leveraged data insights and AI-assisted tools to support marketing content strategy, contributing to enrollment campaign materials and digital outreach initiatives.	
Website Manager , Apex Supplements, Noida-IND	Dec2022 - May2023
- Managed end-to-end website operations and technical enhancements, partnering with cross-functional teams to analyze user behavior and drive data-informed improvements to e-commerce platform. - Engineered custom WordPress solutions and integrated marketing assets, creating scalable responsive designs that aligned with brand standards and optimized conversion rates.	
Full-Stack Developer , Mon Amour, NewDelhi-IND	Jun,2021 - Dec,2021
- Developed end-to-end web applications with React front-end and MongoDB backend, architecting REST-ful APIs and database schemas to support dynamic, data-driven user experiences. - Collaborated with cross-functional product teams to deliver scalable full-stack solutions from concept to deployment, optimizing component-based architectures and database query performance.	

RELATED PROJECTS

Social Media Bot and Fake News Detection Capstone — Team Project

- Served as AI/ML Specialist in team developing misinformation detection platform with dual-approach fake news detection using TF-IDF, Logistic Regression, and DistilBERT transformer models, along with Random Forest bot detector, deployed via FastAPI.

Credit Card Fraud Detection API — XGBoost, FastAPI, Python

- Built XGBoost classifier for penguin species prediction, deployed production-ready REST API with FastAPI and Pydantic validation, performed exploratory data analysis and overfitting analysis.

Program/Course Q&A — Python, RAG, Claude API, GitHub Actions, GCP, Vercel

- Built a retrieval-augmented generation Q&A tool for the Durham College AI program, implementing a GitHub Actions ETL pipeline with GCP bronze/silver/gold storage architecture and a Vercel-deployed frontend powered by the Claude API.

Canadian Immigration Data Visualization and Analysis — Tableau, Python

- Analyzed multi-year Canadian immigration dataset, created interactive Tableau dashboard with various visualizations, and developed presentation demonstrating data storytelling with data cleaning and feature engineering.

Website Security Using Nessus and Snort (Capstone Project) — Nessus, Snort, Splunk

- Designed secure virtual network environment, conducted vulnerability scans with Nessus to identify critical CVEs, implemented Snort IDS/IPS rules, simulated real-world attacks, and captured security events using Splunk SIEM with documented remediation steps.

Penetration Testing Lab Projects — Metasploit, Burp Suite, Nmap

- Performed reconnaissance and network scanning, exploited vulnerable services with Metasploit Framework, tested web applications for SQL injection, XSS, and authentication flaws using Burp Suite, and produced professional penetration testing reports.

EDUCATION / CERTIFICATION

Post Grad Cert Artificial Intelligence Analysis, Design & Implementation, Durham College Expected Aug 2026

- Admitted into the competitive co-op work term option

Post Grad Cert Cybersecurity, Durham College 2025

Bachelor's Degree - Computer Applications, GL Bajaj Institute of Management & Technology 2023

Foundation of Cybersecurity, Coursera 2023

CAREER ACCOMPLISHMENTS

- Increased website traffic by over 30% as website manager for a startup through SEO optimization and enhanced site functionality, driving measurable growth in online visibility and user engagement.
- Managed prospective student engagement and campus operations as campus tour guide and marketing ambassador, coordinating tours and marketing initiatives to support college enrollment and student recruitment effort
